Supply Chain Analytics for Actionable Insights

Dun & Bradstreet's Supply Chain Analytics identifies supplier-level risks for direct (Tier 1) suppliers and sub-tier (Tier 2) suppliers within your organisation's supply chain. This was incorporated with location-specific data to hone in on the potential impact of suppliers in cities impacted by government-enforced restrictions in China and other countries around the globe.

This report shares the findings of advanced predictive models which identified suppliers that are likely to fail in the short term and also combined past data to show recent compliance failures and exposure to other operational risk.

Having a view into how many of your suppliers are potentially at risk enables your organisation to:

- Understand and mitigate supply chain risk in a prioritised and targeted approach when there is limited visibility into your sub-tier suppliers.
- Understand potential compliance risk based on relationships with suppliers.
- Determine alternative suppliers based on comprehensive risk assessment.

Detailed Analysis on Your Supply Chain Risk Exposure

MODELED RISK FACTORS:

Coronavirus Outbreak Risk: Analysis on the potential impact of the outbreak using the direct supplier list your organisation provided. Risk is evaluated based on cities impacted by government-enforced restrictions in China and other countries at the time of the report.

D&B Supplier Evaluation Risk: This rating predicts the likelihood that a supplier will cease operations or become inactive over the next 12-month period.

Business Continuity Risk: Direct and/or sub-tier suppliers' probability of bankruptcy, major financial distress, M&A activity, and other severe high risks.

Compliance Risk: Direct and/or sub-tier suppliers' exposure to Excluded Parties List System debarments; Office of Foreign Assets Control sanctions; Environmental Protection Agency violations; or Occupational Safety & Health Administration violations/penalties.
